Soviet Threatens World Revolution in Retaliation.

By HARRY L. ROGERS.

International News Service. Angered by the action of the power in ignoring Russia and Siberia, Lenin and Trotzky, with the connivance of leaders of the so-called Far Eastern Republic, are planning to "wreck" the work of the Washington conference, according to advices here today from Moscow and Vladivostok.

The plan contemplates revolutions throughout Asia, with principal efforts directed toward India, China and Korea, where it is hoped communistic uprisings of sufficient magnitude can staged to defeat any scheme which may be evolved at the Washington conference for permanent settlement of the Far Eastern problems.

To Ignore Parley Decisions.

As the first step in this plan, Lenir has served notice upon the Powers that Russia will not be bound by the decisions of the Washington confer ence. The second is the calling of ommunist conference to sit either Chita or Vladivostok simultaneously with the Washington parley.

The Siberian "Far Eastern Confer ence" will be modeled upon the famous Congress of the Peoples of the East, held at Baku in the autumn of 1920 which is credited by Soviet leaders with having frightened Great Britain into concluding the trade agreement with the Moscow government

Envoys Refused Recognition.

The so-called Far Eastern Republic recently asked the United States for representation in the Washington conference, which was refused on the ground that no recognized government exists in Russia or Siberia. In the absence of such a government, Secretary Hughes announced, the protection of the interests of the Russian people devolves as a "moral trusteeship"

upon the conference. The Department of State has no confirmation of reports that the Chita government, nevertheless, is to send unofficial representatives to Washing ton. It is pointed out, however, that several high officials of the Far Eastern Republic, formerly residents of the United tates, have police records here, and it is suggested that, lacking diplomatic immunity, they might find
